

Laboratory of Genetics Faculty Candidate

Collective cell movements and tissue-scale patterns in the mammalian epidermis

Monday, February 24, 2020 @ 10:30 AM
Room 1111 Genetics/Biotech, 425 Henry Mall

Maureen Cetera

Postdoctoral Researcher at Princeton University

Dr. Cetera is a postdoctoral researcher in Danelle Devenport's lab at Princeton University. Maureen investigates how tissue patterning is coordinated across great distances and how tissue patterns can shape the morphogenesis of complex, multicellular structures. Currently, she studies Planar Cell Polarity signaling and epidermal appendage formation in the mouse skin.

Host: Francisco Pelegri
